EXPERIENCE

Software Engineer

Everstar

May 2024 — Present
New York, USA (Remote)

- Built the primary React and Next.js (App Router) frontend for an AI document platform as its top contributor (8,900+ commits across 40+ feature modules), shipping the search, chat, and document-drafting experiences over a corpus of 2.9M+ regulatory documents
- Shipped a node-based visual workflow builder on React Flow and XState, with drag-and-drop nodes, edge connections, phases, and a minimap, letting non-technical users compose and run multi-agent AI pipelines as a no/low-code authoring experience
- Cut Largest Contentful Paint (LCP) from around 3.5s to under 600ms, a major Core Web Vitals gain, by batching backend calls to remove request round-trips, aggressive memoization (useMemo/useCallback), route-level code splitting, dynamic imports, and image optimization (next/image), tracked with bundle-size budgets (size-limit) and Vercel Speed Insights
- Built a real-time collaborative rich-text editor (TipTap, Yjs, Hocuspocus) with live cursors and inline comments for multi-user document drafting and review
- Integrated responsive, component-driven UIs (Tailwind CSS, Radix UI) against FastAPI and LangChain backends, including a semantic/hybrid search experience returning results around 90% faster than raw vector search via OpenSearch
- Tech Stack:** React, Next.js, TypeScript, Tailwind CSS, Redux Toolkit, Zustand, XState, React Flow, TipTap/Yjs, Framer Motion, Playwright, FastAPI, OpenSearch

Product Engineer Intern

Ethica

Sept 2023 — May 2024
San Francisco, USA (Remote)

- Built an AI-powered house-search web app (Next.js, Framer Motion) that turns spoken lifestyle preferences into personalized listing recommendations across thousands of properties
- Developed a dynamic, Zillow-like responsive interface with interactive map markers and real-time geolocation via the Google Maps and Mapbox SDKs
- Integrated multi-LLM backends (OpenAI, Anthropic, Perplexity) and audio transcription through a typed API layer
- Tech Stack:** Next.js, TailwindCSS, Next-Auth, Framer Motion, Jotai, Supabase, Prisma, Mapbox SDK

PROJECTS

RAG Ollama

dub.subhranshu.com/RAG-Ollama

- Built an Adaptive RAG agent with a Next.js web interface for document question-answering, routing queries between document and web sources and self-correcting hallucinations
- Served over FastAPI endpoints using LangChain/LangGraph, monitored with LangSmith, with Chroma DB for vector storage
- Technologies:** Next.js, LangChain, LangGraph, LangSmith, Ollama, Llama 3, Chroma DB, FastAPI

SKILLS

- Languages:** TypeScript, JavaScript, Python, SQL
- Frontend:** React, Next.js, Tailwind CSS, Redux Toolkit, Zustand, XState, React Flow, Framer Motion, Radix UI, TipTap/Yjs, responsive design
- Testing & Performance:** Playwright, Jest, React Testing Library, size-limit, bundle analysis, Vercel Speed Insights
- Backend & Cloud:** FastAPI, Node.js, PostgreSQL, Prisma, MongoDB, Docker, GCP, Git, GitHub Actions

EDUCATION

Georgia Tech

Master of Science in Computer Science

Jan 2025 — IN PROGRESS

Vellore Institute of Technology Chennai

Bachelor of Technology - Computer Science and Engineering

Tamil Nadu, India
Aug 2020 — Aug 2024

- GPA: 7.75/10.0
- Courses: Operating Systems, Data Structures, Machine Learning, Reinforcement Learning, Networking, Databases
